DETAILED ACTION

Drawings

1. The drawings are objected to because details are illegible and lines difficult to follow. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

2. The disclosure is objected to because of the following informalities:
In the Specification, detail "b" should read --B-- to avoid confusion in the Figures.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 5, 6, 12, and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sakai et al (4412413) in view of Stahlecker (6295800).

Sakai teaches an arrangement for producing a spun thread from a staple fiber strand (Figure 1) comprising a drafting unit having a delivery roller pair (6), an airjet assembly (5) arranged downstream and comprising a vortex chamber having an air evacuation channel (11), and at least one cleaning channel (2, 3) having a suction opening arranged with respect to the delivery roller pair, wherein the cleaning channel is connected to the evacuation channel in a straight line with a mouthpiece. While Sakai essentially teaches the invention as detailed, he fails to specifically teach a compressed air opening of an injector channel for increasing a low pressure, which Stahlecker teaches (Figure 1, detail 36) as well known in the yarn spinning art. It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to have utilized such an injector channel, so as to increase the air pressure, aiding in the movement of material as needed.

Allowable Subject Matter

5. Claims 7-11 and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Shofner et al (5560194), Mori (5390485), Caviness (5694759), Caviness (5699659), and Yamana et al (4107911) all teach what is well known in the art.
